 Quantities.

must have leaders able to defend the faith that is in them. When we

masses of people are all too ready to run after a professed miracle worker, it is essential that we have trained minds to confront the ignorant, to show to the credulous the error of their ways, and to keep alive and fresh the true tradition of democracy in which this country was cradled and brought to maturity.

---

**DIVER STRANDED**

San Pedro, Calif.—200 feet below the surface of the ocean and four miles off the coast, Julius Johnson, deep-sea diver, on Wednesday died from strangulation when the air hose attached to his helmet apparently snagged on wreckage at the bottom of the sea.

There will be a tea at the home of Mrs. M. E. Jones, in aid of St. Cyprian's Church, on Saturday, Sept. 28, from 2 to 4.

---

**W.M.S.**  
Autograph quilt blocks, which had been worked during the summer vacation, were turned in at the regular meeting of the W.M.S. held at the home of Mrs. J. N. B. McDonald on Tuesday, Sept. 17th. Approximately \$27.00 was realized from the autographs. Plans were laid to hold a supper meeting at which the "Thanksgiving service" would be held, on Friday, October 25th. Each member is asked to be responsible for bringing another prospective member to the supper. Mrs. Layton, Mrs. Miesner and Mrs. Sweet were appointed to arrange the program. Devotional exercises were led by Mrs. P. MacDonald, and the lesson taught by Madamame Hevera, Todd, Miesner, Layton, Reid and Gil-mour. The October 15th meeting will be held at the home of Mrs. A. R. McFadden.

### ST. ANDREW'S UNITED CHURCH

Rev. R. B. Layton, Minister  
Services at 11 a.m. and 7:30 p.m.  
Subject of evening service: "Bar-ing the Face of Our Faith."  
Special music by the Choir.  
The Annual Fall Social of the congregation will be held in the Church Hall on Friday evening, Sept. 20th, at eight o'clock. There is to be an interesting program. Refreshments will be served. Members of the congregation are expected not only to come, but to bring their friends, that any who have come recently may get acquainted with the others.

### INFANTILE PARALYSIS

The majority of schools West of Lacombe are closed on account of this dreadful epidemic. It is noted with regret that one or two schools have not closed, thereby making ineffectual to a certain degree the efforts of the other school trustees.

Dr. Little, when advising the school boards to close their schools where they deemed necessary, gave the closing period as two weeks.

At no time was one week mentioned and it would seem better to follow the advice given and not open Rural Schools until Sept. 30.

### FAIRVIEW CHICKEN SUPPER

Remember the Fairview chicken supper on October 25th.

## 87½c Minimum Wheat Price Not 40c

The grain growers of Western Canada who have closely followed the wheat situation in Canada over the past few months will realize the advantage of having strong co-operative marketing organizations in the grain business.

A reasonable minimum price has been fixed for wheat by the Wheat Board.

## INFANTILE PARALYSIS

The Public School grades have been closed in Lacombe and Bentley, owing to the epidemic of Infantile Paralysis present in our province, and considering the special susceptibility of the younger group of children.

There has been no case to date in the vicinity of Lacombe, but the considerable contact through traffic with the cities has made this preventive measure advisable.

A number of rural schools have also been closed where special contact appeared to make importation of the disease possible, and all school boards will be notified if further measures are necessary.

There have been four cases reported in the Health District since mid-summer, but none during the past week.

Co-operation of parents is asked in preventing younger children from gathering in groups, and in having acute illness in the children investigated by their family physician, particularly if the source of illness is not clearly apparent.

## OGDEN'S FINE CUT

### Make Your Own Job

Conditions throughout the world during the past five years have been most discouraging to all people, but especially so to youth. As they and girls have come out of school and college, ready to take their place in the business world, even at the bottom of the ladder, they have discovered there was no place for them. They have been denied even the opportunity of making a start because the financial and economic world has been out of joint, with business marking time, and no development work being undertaken.

As a result, thousands have become discouraged, embittered because of denied and frustrated hopes and dreams, have become drifters because they have lost hope for the future and accepted the easy but mistaken view that present conditions must be accepted as permanent conditions. Lacking any background of years in which work was plentiful, and having no experience in profitable employment, they can see no light ahead.

Such an attitude of mind is a terrible mistake. Future years will be just as bright, in fact brighter; just as busy, in fact busier; just as rich in opportunity and in enterprising development, in fact more so. The world will not stand still; neither will it move backward. Since the beginning of time, and the dawn of civilization the movement, despite temporary setbacks, has always been both onward and upward. It will continue so.

Consider the most familiar names of people and products on the lips of practically everybody to-day—Henry Ford, Firestone, H. J. Heinz, Coca-Cola, Borden's Milk, Hires' Root Beer, Welch's Grape Juice, Maxwell House Coffee, Jell-O, and similar names. Do these names mean anything to the youth of to-day? They should.

It was in 1890 that Henry Ford began working on a double-cylinder engine in a little shop on his farm. When he went to work in Detroit at \$45 a month he took his shop along, and in 1893 his gasoline buggy was running and for a long time was the only automobile in Detroit. Forty years later he was a billionaire.

Firestone was a huge station wagon who became convinced there was a great future in the rubber business. He bought strips of rubber, cut out crude solid tires and fitted them to buggy wheels. Thus began the great tire industry of to-day.

H. J. Heinz used to grow horse-radish in his garden and peddle it from door to door. This backyard venture put him on the road to becoming Heinz 57.

In 1886 a doctor in Atlanta stood working over a kettle in an old house. On the next corner was a drugstore, and periodically the doctor rushed over, squirted carbonated water into a glass containing a sample of syrup, and tasted the mixture. After about 300 attempts he had the first Coca-Cola.

While holidaying in New Jersey, Charles E. Hires was served a drink by a farmer's wife. Its ingredients were sassafras, tamarisks, and sweet fern, all gathered locally. Hires smacked his lips. Returning home he experimented with herbs, roots and barks. Thus was Hires' Root Beer born.

John Wanamaker, the great merchant prince of the United States, delivered his first bill of goods from a wheelbarrow. Adam Gabel, founder of the stores which bear his name, started with a pack on his back. Timothy Eaton started in a little corner lot store. The story of Woolworth's five-and-ten cent stores is too well known to call for repetition. The great Crane Company, manufacturers of piping, valves, bath-room fixtures, etc., had its inception in a little brass foundry.

These great enterprises of to-day had very humble beginnings, many of them within the life of the present generation. Opportunities are just as great to-day. "What's going to alter our lives is probably happening this minute in a backyard workshop, where some crank is thinking by himself," Henry Ford declared recently. Another man states it this way: "Many of the million-dollar corporations of to-morrow are starting to-day with little capital but an idea. They are beginning in attics, cellars, kitchens, and in the minds of clerks behind store counters."

Recently the head of a huge business in the United States selling many different products told about four new products, all launched since January, 1930, and now selling widely. David was not afraid of Goliath, and observant youth with an idea or capable of assimilating one, with vision, enterprise and daring can just as successfully win out against the Goliaths of big corporations.

To quote Henry Ford again, who recently said that unemployed people "should create their own businesses, no matter how small, instead of waiting for some one to give them a job." And as a writer in *Forbes* Magazine, from which much of the above is taken, says: "Ten years from now we will be reading more success stories gathered from the kitchens and cellars of 1935." No one who has a work-bench or a stove and a dollar—and an idea—he says, need be discouraged.

### Favors Stiff Sentences

#### Severity For Prisoners Demanded By German Minister Of Justice

"Severity" for prisoners as a Nazi tenet was demanded by Franz Guertner, minister of justice, at the opening of the 11th quinquennial penal penitentiary congress in Berlin.

"If criminal law is to represent atonement for wrong done to the community," he told the 400 delegates from 50 nations, "and hence defend and protect the national community from evil-doers, the logical result is severity in the treatment of prisoners so the punishment may be appreciable to the evil."

Guertner also announced that the Nazi Reich has definitely rejected the ancient legal principle: "Nulla poena sine lege" (no punishment unless a law is infringed). Instead, he said, it has substituted the maxim: "Nulla crimen sine poena," under which, punishment is meted out regardless of the incompleteness of a law.

### Strange Service

#### 700 Deaf Mutes Worship In St. Paul's Cathedral

One of the strangest and most touching services ever held under the mighty dome of St. Paul's cathedral on a recent Sunday saw 700 deaf and dumb persons from 14 nations pray and sing without a sound being heard as they were athletes attending the fourth international games for the deaf and mute held in London. The service was conducted in the international sign language. Chaplains and missionaries mounted the lofty pulpit and vociferously acted out the prayers, hymns and songs with eloquent looks and gestures.

Then the congregation joined in prayers and hymns.

Polo was played in Persia only a few hundred years after the birth of Christ, and is one of the world's most ancient games.

### Would Solve Problem

#### Shipment Of Eggs From England Made As Experiment

A few dozen English eggs are making history. Thirty of them arrived in Sydney, Australia, after an air journey from London to Brisbane, and a railway journey of 500 miles from Brisbane to Sydney. The rest reached Rio Grande do Sul, Brazil, after travelling more than 6,000 miles from London by airplane and Graf Zeppelin. Now Lord Greenway, the promoter of the experiment, is anxiously awaiting special letters from Australia and Brazil reporting on their condition on arrival. If the eggs are successfully hatched out, one of the greatest problems of poultry farmers throughout the world will be solved. Under present conditions it is impossible for poultry farmers in distant parts to renew their stocks by introducing young chicks from England.

### Scrambled Eggs

#### Motor Accident Scatters Truckload Of Eggs Over Highway

Marion Snyder, of Harlan, Ind., knows what 100,000 scrambled eggs look like.

Driving a truck over Pocono Mountain near Mt. Carmel, Pa., Snyder was forced to stop when the machine sharply to avoid hitting a train. His cargo of 109,800 eggs was scattered over the highway for some distance. Practically all of the eggs were broken.

### Scrambled Eggs

#### The deep-sea fish, Chlamododon Niger, famous for its voracity, sometimes manages to swallow a fish larger than itself.

It has been estimated that approximately 12 pounds of air is required to burn one pound of coal.

Before you invest in a going concern, make sure you know which way it is going.

### For So-Called Luxuries

#### Bureau Of Statistics Has Issued Some Interesting Figures

What are luxuries? The Dominion Bureau of Statistics started to compile figures on the luxuries produced and consumed in Canada in a year, and was confronted with the difficulty that one man's luxury is another man's ordinary, every-day comfort. This is true of food, furniture, clothes and so on. Even tobacco is claimed by some to be a necessity. So the bureau finally decided to list everything as a luxury which is actually above the line of necessities. It included, therefore, such things as carpets, silverware, jams and cooked meats, and so naturally it did not present its conclusions as a hard-and-fast statement of 'luxury consumption in Canada, but rather an attempt to throw some light on the production and consumption in Canada of goods which are more or less in the nature of luxuries." It found that the factory value of these in 1933 was \$263,608,185, or 12.6 per cent of the total value of production in Canadian manufacturing industries. The retail values would, of course, be much higher.

The bureau also obtained Canadian consumption figures by subtracting exports from the figures for imports and production. It found that in 1933 the so-called luxuries were consumed to a factory value of \$268,342,910.

Some of the individual items are rather interesting. Canada eats candy to the extent of nearly \$17,300,000 per year; ice cream to the extent of more than \$7,300,000; confectionery, including chewing gum, over \$6,000,000. Pies, cakes and pastries for more than \$10,500,000; beverages (not including tea, coffee, cocoa, etc.), nearly \$21,000,000; silk hosiery (which the bulletin says is not often considered a luxury nowadays), nearly \$8,400,000; toilet preparations, over \$5,000,000. These are all factory values.

The surprising item in the list is that for tobacco, as follows:

1931	1933
Cigars . . . . .	\$ 6,016,138
Cigarettes . . . . .	\$ 4,765,393
Other . . . . .	\$ 36,122,977
Total . . . . .	\$ 47,902,512

These again are factory values for passenger automobiles, bicycles and boats, the people of the Dominion paid the manufacturers less than half what they did for tobacco in both these years: \$28,254,984 in 1932, and \$24,518,970 in 1933.—Toronto Daily Star.

### Cannot Identify Fish

#### Freak Caught Near Halifax Has Mouth Two Feet Wide

A freakish fish with a mouth about two feet across, with very little head, and a five-foot grotesque body, was taken from the waters of Bedford basin near Africville, Nova Scotia, and is as yet unidentified.

Frank Gilroy and Martin Moore, residents of Africville, were standing on the shore of the basin early in the afternoon and seeing the large fish come into shallow water Gilroy extended a stick toward it and the queer-looking thing took hold of the stick and would not let it go until it was hauled in on the shore and stoned to death.

The big fish had two rows of teeth, one set of which was hidden beneath a heavy overhanging lip. These teeth were small and sharp and at the sides of the mouth appeared to be slightly curved.

Heavy flappers are at each side of the denizen of the deep and on its belly were two appendages which were to all appearances hands and each of which had five slightly bent joints that looked like fingers.

There was considerable doubt as to the weight of the specimen but the general consensus of opinion was that it was about 75 pounds.

Dr. V. A. Viadikov of the fisheries experimental station, stated that from the description of the fish given, he believed it to be a monkfish or angler fish.

### Enjoyed His Trip

#### Hitch-Hiking Student From Iowa Pleased With Canada

Ray Williams, young University of Iowa student, arrived at Halifax early in August in the course of a "hitch-hiking" tour through Canada, on which he set out from his home in Iowa on July 4.

"About the only time I liked was when sight-seeing in the towns and cities," he said, explaining the reason for having made the trip, over 2,000 miles, so fast. "I found that Canadian people are very hospitable," he added. He had found the trip interesting, he said, explaining that many American college students go on such trips during vacation months.

Dust storms and heavy rainfall had proved a worry in his home state this year, he commented, laughing, adding that just before he had left home he had had a swim in a corn field.

More common colds are contracted during October than in any other month, according to records of the public health service.

The oldest fruit known to mankind is the olive.

### A CANADIAN FAMILY TREE

#### Indian Totem Poles are perhaps one of the earliest forms of heraldry.

The above is a photograph of a totem near Victoria. These totems show the initiated the origin sources of the family and its inter-marriages with other families in the past. Each family is shown by an animal, fish or bird which is its own peculiar "crest" or guardian.

Depression and empty vessels may be a by-word to shipping owners throughout the world but there is little of it evident in Dalren, South Manchuria. From all parts of the globe ships arrive and few leave without substantial cargoes.

Dalren and Hong Kong are the two free ports of the Orient but the former is far more prolific in shipments than the latter. Coastal cargoes to China and Japan may be taken aboard at exactly the same terms as are offered to Japanese or Chinese ships. Many vessels, in fact, are under Japanese charter and the captains declare that they love the coastwise trade and the slight glamour it offers in a shipping world grown mouldy in serious trade.

More colorful, however, than the coastal vessels are the tall tramps, bringing all kinds of goods, flour from Australia, ores from Malaya, rice from Rangoon, tropic hardwood from Borneo, hemp and jute from Calcutta, charcoal from Chiampo, caviar and salmon from Otaru, spices and tin from Singapore, saffron and cane sugar from Java, scented soaps and red wine from Marseilles, spirits from Glasgow, potash from Jibuti, gypsum from minor Mexican ports, chocolate, dyes, films and steel plates from Hamburg or Antwerp and paper and locks from Cuthenburg or Oslo, all port their cargoes into Manchoukuo through Dalren.

"When they sail, these stout ships carry away beans, soyas, white or red, buckwheat, millet, maize, kaoliang, beancake, ginseng, groundnuts, hemp, sesame seeds, with their oils, iron, wild silk, sulphate of ammonia, bean oil, hides, skins and bristles.

Many of these free-lance freighters never know from month to month whether they will be bound. Above their stained decks and deep holds still lurk the romance of the sea, the lure of the unknown, the old traditions. There are no prearranged schedules. It may even be a whole year before they see their home ports.

For those in search of the ageless traditions of the sea, Dalren is the place to go. The unexpected and a fabulous adventure, so wholly associated with the sea in former days, may still be unearthed in the wild-looking vessels which cough their way haltingly in from sea with rich cargoes and stagger off later with heavy shipments to the ends of the earth.

**Motorist Had Narrow Escape**

#### Lightning Hit Car And Carried Away Windshield Wipers

Lightning played a strange prank when a vivid flash carried two windshield wipers completely away from an auto operated by Gordon Bilby. The car was proceeding down Prince Street in Truro, Nova Scotia, during a heavy downpour of rain and a blinding flash dashed the driver for a second and he was startled as he saw the two windshield wipers being torn from the windshield directly before his eyes.

**Anxious To Know**

A very nice old lady had a few words to say to her granddaughter. "My dear," said the old lady, "I wish you would do something for me. I wish you would promise me never to use two words. One is swell and the other is lousy. Would you promise me that?"

"Why sure, Granmy," said the girl. "What are the words?"

British laundries have an annual revenue of approximately \$10,000,000 from handkerchiefs alone.

### Celebrating Anniversary

#### Violin Industry Started In German Town 250 Years Ago

Mittenwald, Germany, a village in the mountains of Bavaria, is now celebrating the 250th anniversary of its violin industry, begun in the 17th century by Matthias Klotz.

Throughout the summer the town folk presented a play, "The Song of the Stars," telling the story of Klotz and his wanderings over Italy, where he learned instrument making. The play will be staged again this winter at a nearby town as part of the entertainment for the winter Olympics.

The story of Matthias Klotz is a romantic one. When he was a boy of 10 his peasant family sent him to Italy to study under famous violin makers there. Twenty years later he returned to Mittenwald, opening his own workshop. Apprentices flocked to him and soon he established the fame of the town for fine instruments, a reputation Mittenwald retains to-day.

After making a number of instruments, Klotz's craftsmen had to go out into the world themselves to sell them. Strapping their violins on their backs they wandered through nearby countries, giving demonstrations and making sales in castles and great monasteries.

### Correspondence Courses

#### Extending Education To Those Out Of Reach Of Schools

Nine years ago the Ontario department of education started correspondence courses for persons out of reach of school either for the whole school year or part of the summer months. The courses were intended also for those physically unable to attend school and for whom no provision was made for education.

During the last school year the enrolment was 1,800 of whom 50 were physically unable to attend school. The courses are free and the department pays all expenses. Average cost of educating a pupil for a year in this manner is from \$12 to \$15.

### American Boy Divers

#### Crude Combination Of Many Articles Enables Boys To Submerge

Three Maine youths wanted to see what the bottom of Kennebec River in Richmond, Me., looked like.

So the boys, Paul R. Dyer, Stanley Griffin and Robert Cate, constructed diving apparatus from a five-gallon gasoline can, two automobile tire pumps, a small corrugated can and some cement.

Successful in their first attempts, they plan to explore greater depths.

### FASHION FANCIES

#### Lead Phosphate Reported To Have Effected Apparent Cure

The apparent cure of a few "hopeless" cancer cases by the administration of lead phosphate to a degree producing lead intoxication was reported to the American Chemical Society.

Dr. A. E. Osterberg, Dr. J. A. Bagen and Dr. B. T. Horton of the Mayo Clinic, Rochester, Minn., said favorable results were obtained in 14 out of 85 instances.

The procedure involved administering a quantity of lead phosphate during a period of approximately 10 days in amounts sufficient to produce acute lead poisoning. This was on the theory that a heavier concentration of the lead occurs in the malignant cells of a tumor than in the normal tissue, and many times results in necrosis or slowing away of the tumor. The normal tissue is able, the reporting physicians said, to recover completely from the concentration of lead.

The lead poisoning can be controlled by calcium treatments.

### Marking The Ballot

#### Strange As It May Seem, Many Voters Muff The Job

Placing an X beside a candidate's name is a simple task but at the approaching Dominion general election it is likely 25,000 or more electors will muff the job.

In the 1930 contest 24,119 lost their votes through improperly marked ballots and there are more parties and candidates this time to confuse the voter.

Parliament places the ballots in the hands of voters and supplies pencils to mark them. That is as much as it can do. Electors have only to make the crosses themselves. Yet in 1930 ballots were rejected in every constituency in Canada to mark their votes.

Markings in addition to the cross, use of a pen or colored pencil instead of the black pencil provided and signing of the ballot by the voter are the most frequent causes of spoiled ballots.

Through habit many men use their fountain pens and deputy returning officers throw out their ballots. On recounts, however, judges frequently have ruled such ballots valid. The Election Act says the cross must be made with a black pencil.

Many voters start to mark their X opposite the wrong name, score it out and then mark it opposite the candidate they wish to support. This spoils the ballot. They should ask the deputy returning officer for a new one.

Voters sometimes ask why all this fuss about markings when the voter's choice is plainly indicated? The answer is that precautions are necessary to discourage bribery. They are the culmination of years of experience with elections, the frailties of human nature and the cunning of some politicians.

In the '90's and earlier when the population was small, party workers knew which voters were Conservative, which Liberal and those "on the fence." Of the undecided variety some would sell their votes and the temptation of workers in a close race was strong.

But unless the voter buyer could be sure those he bought went to his candidate there was no use buying them. Any ingenious devices were used to all but force voters to identify ballots while they were being counted. The result, has been the regulations to prevent distinguishing marks.

Election workers claim there is very little direct bribery now. Ridings are so populous and party affiliations of voters so indefinite it would cost too much. In addition there is the almost certain risk of the election being voided.

### New Cancer Treatment

#### Lead Phosphate Reported To Have Effected Apparent Cure

The apparent cure of a few "hopeless" cancer cases by the administration of lead phosphate to a degree producing lead intoxication was reported to the American Chemical Society.

Dr. A. E. Osterberg, Dr. J. A. Bagen and Dr. B. T. Horton of the Mayo Clinic, Rochester, Minn., said favorable results were obtained in 14 out of 85 instances.

The procedure involved administering a quantity of lead phosphate during a period of approximately 10 days in amounts sufficient to produce acute lead poisoning. This was on the theory that a heavier concentration of the lead occurs in the malignant cells of a tumor than in the normal tissue, and many times results in necrosis or slowing away of the tumor. The normal tissue is able, the reporting physicians said, to recover completely from the concentration of lead.

The lead poisoning can be controlled by calcium treatments.

### Gift Was Acceptable

#### King Pleased With Jubilee Offering From Free State

The Jubilee present which Loyalists in the Irish Free State have given King George is declared to be not only nationally appropriate but most acceptable to His Majesty. It is a beautiful antique silver potato ring. These rings, which measure up to a foot in diameter, were in former times put in the centre of the dining table and within them were placed the potatoes, cooked in their jackets, to keep them from rolling about. Reminiscence of the days when the potato was the staple diet even of the wealthy, a sixteenth century ring of good design has sold an auction for considerably over \$5,000. The King is as devoted to old silver as the Queen is to antique furniture.

### Are Carefully Trained

Pigeons are trained as carefully for racing as a horse and usually when a pigeon becomes lost it is because it was in poor condition to start the race. The owners start training their birds at the age of two months. The pigeon reaches the peak of his racing between the ages of two and four years.

Rainbows are not semi-circles, but complete circles. If we were high enough in the air, we could see the entire circle.

### Leprosy Reached The United States

from both Europe and Africa.

## You can tell by his smile

Things are looking up... times have improved and he's again "rolling his own" with Ogden's Fine Cut. Why not "get back to Ogden's," yourself and again give yourself the pleasure Ogden's alone can give. Use the best papers, too... "Vogue" or "Chanteclair."

58 Paper Hands, any number, now accepted as a complete set.

OGDEN'S FINE CUT

Your Pipe Knows Ogden's Cut Plug

Wiley Post

Some of The Aerial Exploits Of This Famous Flyer

Here are the aerial exploits of Wiley Post, who with Will Rogers, film comedian, was killed in an airplane crash in Alaska.

With Harold Gatty, Post flew around the world in eight days, 15 hours, and 15 minutes, in 1931.

In 1933, he made a solo round-the-world flight, in seven days, 15 hours, and 49 minutes.

The following year, Post announced he would concentrate on the practical side of aviation. He made two sensational high altitude trips over his home town of Bartlesville, Okla., wearing a "super-charged suit" of his own design.

Post made four unsuccessful attempts to make a transcontinental flight through the stratosphere. Each time he was forced down on the way from Burbank, Cal., to New York, the last failure June 1, this year.

He used but one ship in all of his achievements—the "Winnie Mae."

### Odd Trick Of Nature

#### Sailor Relates Story Of Three-Year Bitch In 35 Fathoms

Nelson Lash was in the crew of the scalloper, Virginia, three years ago when she was rammed and sunk off Georges Banks. With his clothes in a forecastle locker was a pocket handkerchief, his initial embroidered in a corner.

Now Lash has his handkerchief again, for he's in the crew of the Louis A. Thebaud, and in her scallop drag the crew found a handkerchief with Lash's initials in the corner, in almost perfect condition after a three-year lapse in 35 fathoms!

### A Large Birthday Gift

#### British Secretary Of Air Receives Two-Plane Hangar

Lord Londonderry, British Secretary of Air, has just celebrated his 57th birthday, and his wife's present to him was a hangar big enough to accommodate two airplanes. It stands on his estate at Mount Stewart, Newtownards, Northern Ireland, where there is already an airport with a landing field of 50 acres.

**Only One Limit**

Ten years ago the late Will Rogers was in a plane which had left Los Angeles for Kansas City. The ship hit an air-pocket and dropped 200 feet. "It's how far," asked a frightened passenger, "can one of these planes drop?"

"Well," Rogers informed, "the ground's the limit, boys!"

Mammoth cave, Ky., has been equipped with 12 floodlights and 10 smaller projectors to illuminate its interior.

## Work Of Reclaiming Drouth Stricken Areas Proving A Major Task

If the work being started this year to reclaim drouth-stricken areas of western Canada had been undertaken 20 years ago "the farmers would not be facing the serious situation they are to-day," declared a statement issued by the prairie farm rehabilitation advisory committee. Dr. E. S. Archibald, director of Dominion experimental farms, is chairman of that committee.

Reclaiming sections where soil drifting had been exceptionally severe was a major task in itself, the statement said. This work was being directed by Dr. E. S. Hopkins, Dominion field husbandman. "Large scale co-operative efforts by which groups of farmers will undertake soil farming, the planting of trees for shelter belts around farm homes, buildings and a paddock, are also being launched. It is hoped to have whole townships included in this co-operative scheme."

Applications from 4,800 farmers have been received for advice and assistance in constructing small dams and other means of conserving water for domestic and general use on the farms. The committee intended to give all the assistance possible to these applicants.

Millions of trees were being provided to farmers and careful study made of the effect of trees as wind breaks. The drouth resistance of various grasses was being studied.

Provincial governments on the prairies as well as the universities and farmers' organizations were co-operating in the work.

The prairie farm rehabilitation act, introduced into the commons last session by Hon. Robert Weir, minister of agriculture, provided \$760,000 for rehabilitation work this year and \$1,000,000 would be voted under it in each of the next four years. In addition \$500,000 has been allotted under the public works act for water developments.

### Canada Buying More

#### June Imports From United Kingdom Higher Than Last Year

We have had occasion in the past to complain of the paucity of the response of certain Dominion to the provisions of the Ottawa Agreements so far as their purchases from the Mother country were concerned. It is with satisfaction, therefore, that to-day we find ourselves in the pleasant position of being able to announce that imports into the Dominion from the United Kingdom increased from a total value of \$1,928,000 in June, 1934, to \$1,980,880 last month. We look for this to continue on a still higher scale. The new Order in Council which imposes a surtax of 33 1/2 per cent. on all goods imported into Canada from Japan should help, Statesmen in the Dominion may now be realizing that a boy's best friend is his mother. Neither Japan nor America can take the place of the Mother country in Canada's national life—London Sunday Dispatch.

### Ornamental And Useful

#### Fruit Of Plants Grown For Beauty Has Food Value

Beauty for beauty's sake was once considered the only reason for the growing of ornamental plants, but Dr. A. S. Colby, chief in small fruit culture at the College of Agriculture, University of Illinois, says that the food value of several ornamental plants has given them a new value. The Japanese quince is one of the shrubs recently found to possess "dual personality" in that its fruit is valuable in supplying additional pectin and acidulant needed in making jelly with apples or other fruit. Long ago, Indians used the fruit of the high bush cranberry to make a jelly which was eaten with buffalo meat. They called the fruit "pembina." To-day, this fruit is being rediscovered as a source of both beauty and food. Nanking cherries also come under the group of edible fruits produced on plants grown primarily for their ornamental value.

### Automatic Lights

#### Highway Lights Turned On And Off By Action Of The Sun

Highway lights turned on by the setting sun and turned off as the sun rises will be placed by New York state on a strip of state highway at nearby Latham soon, as the state's first experiment in highway lighting.

The lights—25 in number—are sodium vapor lamps controlled by photo-electric cells. As increasing light from the sun's rays play on the photo-electric eye, the lamp goes out. They go on by a reversal of this process, to shine through fog, rain, or snow.

Turkish towels are so-called because the materials from which they are made resemble a cloth of Turkish manufacture.

Politicians must envy the moon. It always comes back after an eclipse.

### Properties Of Moon Beams

#### Some Doctors Convinced They Affect Highly Sensitive Natures

The moon is under a cloud again. Of late it has been blamed for the bad weather and rough seas, for poor radio reception, and for bringing bad luck to those who looked at the new moon through glass, forgot to bow three times to it, or omitted to turn their money, if they had any.

Now an old and more serious allegation has been revived against the moon. A man told a London coroner that his sister behaved quite normally except at full moon when she got into a violent temper and would pick up a chair and smash all the crockery.

She would sit at the window and the sight of couples strolling about in the moonlight or standing in doorways made her lose her temper.

This belief in the mysterious effects of the moon on certain temperaments goes back for centuries. Shakespeare spoke of it as d'Albacon, and Milton referred to "moping melancholy and moon-trust madness."

Modern medical men, however, are often inclined to discredit the idea in spite of the fact that the word "lunacy" comes from the Latin "luna"—the moon.

But those who regard the "moon-struck" theory as a superstition handed down from the Dark (if moonlit) Ages have yet to explain why well-authenticated cases of moon-affected people recur.

The one that has just come before the London coroner would seem to be strongly substantiated by those who lived with the woman concerned.

Not long ago a father told a judge that his son became irritable at the full moon. But a doctor in court, asked if insane people become worse at the time of the full moon, replied that that theory was "pure rumour" for which there was no foundation.

A possible explanation is that the effects of the moon are more apparent than real. It might be argued that it is not the moon that has influenced these people—but the belief that it would influence them.

In other words, the age-old idea that the moon made people "queer" had the effect of producing on certain sensitive temperaments. Through thinking that it would make them queer they at last became queer, without any actual assistance from the moon.

Some doctors are quite convinced, on the other hand, that the moon has a definite effect on highly sensitive natures and they will not allow such people to sleep in the moonlight without covering their faces. Sailors also cover their faces against the moon when sleeping.

Very "lunar" serious scientific investigations of the properties of moon beams have been made, however, and it is possible that one day the old superstitions may be proved to be not such "moonshine" after all.

No less an authority than Prof. A. O. Rankine has explained that there is a variation of weight with tides and the new 70,000 ton liner Queen Mary will actually get 20 pounds lighter when the moon is overhead than when the moon is on the horizon.

So, if the moon can make lighter a great ship like this, surely it is understandable if one poor little human being occasionally becomes a trifle "light headed" under its influence, it is argued.

### Highway Menace

#### Self-Satisfied Drivers Often Constitute A Danger

A good many operators believe that twenty, thirty or a hundred thousand miles behind the wheel without accident is proof that they are excellent drivers and that it entitles them to give sound driving advice. In their self-satisfaction they drive as they like to drive, and disregard laws enacted for the safety of the public, apparently considering themselves superior—immune to the hazards which beset ordinary people—and flouting the suggestion that their behavior might contribute to a tragedy.

It is this conceited, self-satisfied attitude—which makes them believe that traffic regulations are all right for the "other fellow"—which causes a new group of drivers to appear on the accident records each year. It is this discourteous attitude which is the greatest highway menace, the greatest hindrance to efforts to promote safer transportation.—Rockville Record.

### England Gets Big Order

#### Ships For Soviet Government To Cost About \$1,600,000

Seven vessels, to cost approximately \$1,600,000, have been ordered by the Soviet government from the Furness Shipbuilding Company, Haverton on Tees. It is reported in advice from England. The contract is the biggest single order given to a shipbuilding firm in the last ten years and is the first order from the U.S.S.R. to be given a British yard. The order, on a cash basis, will keep the shipyard employed with a full complement of vessels for a two-year period. The ships to be used in the timber-carrying trade, will be specially constructed to break ice.

### Prices Have Changed

#### Great Increase In Real Estate Values In Old London

Tourists revisiting London again after an absence of several years are greatly impressed by the multiplicity of new buildings and the "preparations being made for the erection of still more," writes John Gripp in the New York Sun. But Londoners themselves are always being treated to structural surprises, for in the continued building boom which changes take place in the appearance of a block or a street.

The rise in real estate values in the inner rings of the capital has induced certain Londoners to turn up old records to see what the new golden ages were worth some centuries ago. While no one would gain as much as Picaresque in a stroke of realty wealth in terms of land value, nearly the whole length of it was sold in the eighteenth century for \$1,500. The deal, countenanced by employees of the State, was on a par with certain respectable dispersals of Crown lands in earlier times. Not every Londoner knows, either, that in the Cromwellian days Hyde Park, which covers 364 acres was sold to three men for a total of \$85,000. It is worth millions to-day and, what is more to the point, is unpurchaseable.

The Duke of Devonshire, who is Charles II, the Merry Monarch, for its preservation as an open space free to the public, for shortly after he came to the throne the sale was revoked and the land returned to the Crown.

### Grain Appeal

#### U.S. Government Opposes Move Of Chicago Dealer

The appeal of Arthur W. Cullen, Chicago grain dealer, from an order suspending him from trading privileges for two years, was answered by the U.S. government.

The reply to the Canadian-born operator was a 127-page brief filed before the United States circuit court of appeals by Wendell Berry and Leo F. Tierney, special counsel for the U.S. department of agriculture. Oral arguments are expected to be heard some time in October.

The government attorneys contend the grain futures commission was fully within its jurisdiction in suspending the trader.

### Model Lifts Big Weight

#### Toy Steam Engine Capable Of Lifting Half A Ton

Perhaps the only toy model stationary engine in the world capable of lifting a ton has been constructed by Walter Gregory, Quincy, Mass.

The engine, made at home, is run by steam, and technical experts have travelled many miles to see it.

The boiler dimensions are: Height, 24 inches; diameter, 9 inches; and three-quarter-inch tubes, 15 inches long.

Insects which crawl inside the Jack-in-the-Pulpit flower are never allowed to escape.

A clergyman named Ernest Fleming lives at Peters Landing, Tenn.

## The SNAPSHOT GUILD

### Watch Your Perspective

What would your girl friend or wife say if you made your appearance with her picture after the Sunday outing, showing her with enormous feet such as those in the picture to the left?

War would probably be declared when you made the familiar statement: "Well, dear, the camera never lies." But the truth is that the camera didn't lie for it caught just what the lens saw.

Evidently the amateur who took the picture held the camera quite low, and probably less than three feet from the two feet of the attractive young lady. Her head and shoulders were at the right distance from the camera to give good perspective, but her feet were perhaps thirty-six inches nearer the lens.

Perspective in a picture is determined by the point of view from which the lens makes the picture, or after all the camera did not tell a lie.

The white lie, but portrayed exactly what it saw and just about what the eye would see if one looked at the subject from the same point of view.

True, this is a much exaggerated example of bad perspective, but in making portraits, or indeed "close-ups" of any object, we should be careful to see that no part of the subject is very much nearer the camera than the rest.

In making portraits we are sometimes tempted to permit our subject to place a hand well forward on the arm of the chair. If working within three or four feet from your subject the hand will appear abnormally large. Better have the hands in the lap in a natural position and close to the body with most of the fingers folded under.

Now you should know how and how not to get distortion in your portraits so let your conscience be your guide.

JOHN VAN GUILDER

### Long Range Forecasts

#### Establish Definite 23-Year Cycle Of Weather Changes

Devastating drouths such as that of 1934 may in the future be predicted years ahead as accurately as tomorrow's weather is now forecast.

Dr. C. G. Abbott, secretary of the Smithsonian institution and outstanding authority on radiation of the sun, announced new results of his studies of the effect of variations in the sun's rays on the earth's weather which hold great promise for long-range weather forecasting. Analysis of his data shows he has secretly predicted the 1934 drouth with a high degree of accuracy.

He has established a definite 23-year cycle of weather changes which is apparently dependent on a double sunspot cycle in solar radiation. In this cycle temperature and rainfall at numerous points over the surface of the earth approximately duplicate conditions at the same points 23 years before.

Dr. Abbott was quick to point out that the prediction would not follow exactly from month to month each 23 years, but that in general, normal or abnormal weather could be expected to recur at approximately that interval. Thus another major drouth may be expected to occur in 1957.

### Architect Had His Way

#### Proved To Indian Rajah His Idea Best

A maker of beautiful things is mindful of the things that are more beautiful than anything human hands can fashion. So it was that the right reply came to the lips of a great architect when his work was questioned.

Sir Edwin Lutyens had been chosen as the architect of the new Delhi, but the Viceroy of India had different ideas about the style of the building. Lord Hardinge wanted him to adopt the pointed arch, and said that the greatest benefactor India had ever known was Rajah So-and-so, who had always adopted the pointed arch in all the great buildings of his time. Sir Edwin Lutyens' reply to this was that the greatest benefactor to India, in his opinion, was God, and that He had not given the pointed arch when He gave the rainbow.

The architect had his way.

### Largest Open-Air Zoo

#### Is One Of The Seven Wonders Of East Africa

After a visit to the famous Ngoro Ngoro volcano crater, where in a depression many miles wide, thousands of wild game of all kinds disport themselves in what is the world's largest open-air zoo. Sir Harold Macmillan, governor of Tanganyika, has outlined plans for making it possible for automobiles to reach the rim of the crater. This will enable tourists to view one of the seven wonders of East Africa.

Until as late as 1842, Lower California was believed to be an island instead of a peninsula.

The amount of branded beef sold in Canada during June, 1935, was 3,312,501 pounds.

## Fur Farming In Canada Grows In Recent Years To Considerable Proportions

### A Monster Camera

#### Bridge In San Francisco Bay Throws Picture On Concrete

The world's largest camera has been discovered by accident in the middle of San Francisco Bay. The "camera" is the centre anchorage of the huge suspension bridge. It is a concrete affair about the height of a fifteen-story building, 197 feet long and 82 feet high.

Vent holes near the top of the tremendous box act as pinholes, lenses, so directing the rays of light from outside that they cast an enormous picture on the concrete partition inside that divides the anchorage in two. The vent holes cut in the six-foot walls are rectangular apertures 1 foot by 2 feet. The picture on the "plate holder" of the giant camera are of course upside down, as in all cameras. They show the bridge towers and passing ferry boats, sometimes in natural colors, sometimes in black and white, depending on the time of day. The principle of the pin-hole camera is an old one. Long before the development of light sensitive materials for photography, medieval nobles had small apertures cut in the walls of their houses so that they could watch life in the street outside reflected on the white wall of a darkened room.

### Sugar Is Brain Food

#### Provides The Energy Which Is Necessary For Thinking

An article in Science Service says the old slogan about reaching for a cigarette instead of a sweet may be all right for those who want to lose weight but for those who want to do some heavy thinking, it should be reversed.

Experiments showing that the brain gets its energy for thinking from glucose or sugar were reported here to the American Physiological Society by Dr. H. B. Haworth and J. F. Franklin of Yale University.

The brain takes sugar from the blood, breaks it up into simpler chemical combinations, and burns the lactic acid thus obtained to get energy just as a steam engine gets energy from burning coal. Dr. Haworth explained.

He and his associate found accidentally that when nicotine is mixed with brain tissue in a flask, the brain cannot burn lactic acid but the burning (oxidation to the chemists) goes on just the same if glucose is present. So it appears that the brain has two ways of getting energy for thinking from glucose or sugar.

### Experience Is Valuable

#### Man Who Works Over Long Period Knows His Job

New York Central Lines recently retired on pension 70 employees who had reached the age of 70 and were thus ready for retirement under the rules. They were only one per cent. of the railroad's personnel but a considerable group all the same, and these 700 oldsters give the lie pretty satisfactorily to the legend that men over 40 fight as well as they can to the scrap heap. Among the retired 700 were many of the ablest employees on the rolls.

A railroad man, or any other for that matter, in his fifties and sixties is not necessarily the dodderer that many of our brighter minds would have us believe. Curiously enough, when one has done his work faithfully and well over a long period, he is likely to be somewhat better at it than a person of less years and experience.

Some employers have fallen for the ridiculous idea of 40 as the age limit. More have not, and it is good to see it refuted altogether by the New York Central's experience.—Detroit Saturday Night.

### The Soy Bean

#### Is Used In Many Food Products Including Ice Cream

Chemists have found that soy bean is useful in many spheres. From it are now made, in addition to valuable cattle feed, paint oil, varnish, enamels, cellophane, linoleum, buttons, handles, box covers, window trim sticks, electrical parts, printer's ink, glycerine, celluloid, glue, soap and rubber substitutes.

In the realm of foods for which the soy bean is useful are sixty-five different products. There is even soy bean ice cream.

The soy bean has been a farm crop in the Orient for centuries. Chinese make milk, butter and cheese from it. It was first grown in this continent in 1904.

### South Africans Like Cereals

#### Cheops And Steaks Losing Place On Breakfast Table

South Africa at one time was a great meat-consuming country, and twenty years ago breakfast and steaks were fixtures on the breakfast table. To-day they are a rarity, and cereals of the wheat variety have taken their place. And it is a fact that there is a marked difference in the physique generally of the present generation when compared with their parents and grandparents. The young people of to-day are not nearly so largely built.

The story of the opening of the trades exhibition in an English town where the committee of the butchers' section presented the mayors (who opened the exhibition with a joint of prime beef in lieu of a bouquet of flowers, presents a moral to the trade in South Africa, says a correspondent of the Cape Argus. He suggests a slogan: "Eat Meat to Avoid Defeat."

### Now Long Service

#### One Of Great Britain's Historic Locomotives Was Recently Retired From Service After Having Run 780,000 Miles

One of Great Britain's historic locomotives was recently retired from service after having run 780,000 miles, reports the Canadian National Railway. It was the last of the "single wheelers" in public passenger service and was built in 1888. The most distinctive feature is the single pair of driving wheels, which are seven feet in diameter.

### Not All Furs Which Canadian Fur Companies Turn Into Wearing Apparel Come From Animals Which Roam The Northwoods Of The Dominion

Many of the animals which carry the most valuable fur coats have never seen the northwoods. Neither they nor their parents and in many cases their grandparents have ever seen or known the freedom of the bush. They were born and raised on farms devoted entirely to the raising of fur crop. Government figures show that there are at least 4,471 fur farms in Canada and that their annual "output" of furs is valued at \$3,712,443.

The idea of fur farming came from the habit of trappers to capture alive young foxes and keep them near their cabins so that animals' fur coats were in their prime. So fur farms were started and fox became the main fur-bearing animal kept on these farms. Silver fox was the animal most sought by the fur farmers and, so valuable did their pelts become that a pair of days of fur farming that a pair of days of fur farming for breeding purposes cost as high as \$35,000. To-day 93 per cent. of the crop of the fur farms is silver fox.

But though fur farming has become a big business, with farms throughout Canada, it is by no means perfected. At Summerside, Prince Edward Island, there is a government experimental fur farm. And here scientists are busy developing methods whereby better furs can be raised on the farms. Diets for captive animals are now being studied and experiments are now being carried on to discover the best time of the year to supplement the regular rations of these farm-raised fur-bearers with vitamins A and D to produce a good growth of pups.

Experiments have also found what they think will overcome one of the great difficulties of fur farming—parasites which infect the animals. No matter what methods have been tried, what precautions have been taken, external parasites are to be found on the animals. The Summer-side scientists have developed what they now believe is a sure cure, the spraying of all kennels, nests and all the wood-work of the pens with kerosene oil three times a year. Other experiments now going on are revealing new information regarding the influence of protection from weather conditions on the development of fur; whether dried meat, meat meal and fish meal could replace fresh meats during summer months; work is now progressing to determine the iodine requirements of silver foxes in captivity.

While foxes are the main animals on the farms, other fur-bearers are also being raised, including mink, raccoon, fisher and fitch. The mink in particular is easily domesticated and there are now 577 mink farms in Canada. Minkraker farms are rapidly multiplying and during the last three years more muskrat skins were cured than any other kind. But the silver foxes still bring in the big money, with \$87 as the high price last year for one silver fox skin.

Fur farms, in case you are interested, have a capital investment of nearly \$14,000,000 by the latest government statistics, while the animals on the farms are valued at \$7,500,000.

There remain, of course, a great many trappers who depend upon the native wild animals for existence and pit their skill and cunning against that of the forest denizens. From them, too, fur manufacturers draw valuable shipments of fur each year to grace the models of city fur shops.

### South Africans Like Cereals

#### Cheops And Steaks Losing Place On Breakfast Table

South Africa at one time was a great meat-consuming country, and twenty years ago breakfast and steaks were fixtures on the breakfast table. To-day they are a rarity, and cereals of the wheat variety have taken their place. And it is a fact that there is a marked difference in the physique generally of the present generation when compared with their parents and grandparents. The young people of to-day are not nearly so largely built.

The story of the opening of the trades exhibition in an English town where the committee of the butchers' section presented the mayors (who opened the exhibition with a joint of prime beef in lieu of a bouquet of flowers, presents a moral to the trade in South Africa, says a correspondent of the Cape Argus. He suggests a slogan: "Eat Meat to Avoid Defeat."

The average income of Napoleon III. of France amounted to \$12,419 a day.

Some people think newspapers should please everybody. It can't be done.

FORFUSED COLLARS

#### MANY PARTIES AND MANY CANDIDATES

With federal polling day still nearly a month away, a new record has been established in Dominion nominations. The previous record was set in the 1921 elections when the list of aspirants for election to the House of Commons numbered 644. That was exceeded by one yesterday and it would not be surprising if the field is increased by at least another hundred, candidates before nominations are officially closed.

The record number of candidates is due to the record number of parties. In previous federal elections, the contests were practically restricted to the two major parties, Liberals and Conservatives. Since the last general election two additional federal political parties have been organized, the C.C.F. and the Reconstructionists. The U.F.A. made its entrance into the Commons in 1921, but the election of farmer candidates as federal representatives of separate groups has never made headway outside Alberta. In the last house, the U.F.A., C.C.F., Progressive, Labor and Independents together were only represented by two dozen members.

New another group is making its entrance into the federal field, the Social Credit party. It will make its chief bid for House of Commons representation in this province. The elections in several Alberta ridings will have four and in some cases five parties to choose from, and under the circumstances it will be difficult to

predict results. From the standpoint of stable government at Ottawa, the presence of so many groups in the field is not reassuring, however.

#### TOWN OF LACOMBE

NOTICE is hereby given that the Council of the Town of Lacombe proposes to undertake the work of re-conditioning the grade of the Provincial highway through the Town and surfacing same with an oil preparation under the direction of the Provincial Department of Public Works. The cost of such work is estimated at \$6,000 of which the Provincial Government will assume one half. The Town's share of the cost is to be financed partly from current revenue and the balance by the issue of short term debentures. Ratepayers should lodge their complaints with the undersigned within two weeks from the date of this notice.

DATED at Lacombe this 20th day of August, 1935.  
LEWIS P. MINKLER,  
Secretary-Treasurer
